

## Armoured Track Tension System

**Customer:**

Europe based instrumentation company

**Loadcell:**

W275-Z0664 8000kg

**Generic Type:**

Corner scale

**Special Features:**

In house assembly of free issue hardware

A military tank manufacturer required a robust reaction pad system to set a track tension control jockey wheel. The reaction pad was designed to accept heavy handling and extreme environmental conditions, particularly dust ingress. An 'economic' solution was sought whereby Novatech produced the loadcell and amplifier, installed these into the client's free issue hardware, and calibrated the system as a whole.
